

ALX-LITE

OVERVIEW

The ALX-LITE is a simple, entry-level time-based chemical dispenser. It restricts access to chemicals to only authorized individuals either with a 4 digit access code or HID® RFID card. The LITE unit does not use an internet connection, making it the perfect option for facilities seeking a standalone allocation system. It also records all chemical consumption data into a simple .CSV file format that can be downloaded to a USB drive for review.

SIMPLE

The easy to use interface makes configuring the unit simple, allows for minimal training, and reduces the likelihood of failure in the field.

COST EFFECTIVE

Incredibly small footprint, measuring 11.5" x 9.5" x 5", requiring minimal space when mounted on a wall. Provides a variety of options to meet any plant's specific needs.

CONTROL

Only employees with an access code may operate the unit to dispense chemical. A separate login for administrators allows the unit to be configured.

FEATURES

FLEXIBLE AND EXPANDABLE OUTPUTS

Solenoid valve output Devices simply daisy-chain together for plug and play installation and replacement. Available as single 2-way valves or four 3-way valves for controlling AODD pumps.

EASY TO USE

Simple and intuitive user operation makes configuring the unit easy for anyone by using the bright 5"x 2" text screen and easy to read, sealed membrane keypad.

AUTHORIZED USER LOGIN

Access to controllers can be limited by requiring a 4-digit login for all employees. Login codes are custom to each individual User allowing all dispense activities to be recorded for review.

DATA ACCESS

Dispense reports for all Users are recorded directly to the unit and can be downloaded to USB for review, providing greater accountability of chemical consumption. (USB port is sealed to IP68 when cap is installed)
